

Lab 1 — Requirements Table

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale
FR-001	Functional	The system shall allow the Buyer to browse available second-hand products and place an order for a selected product.	High	Pass: The Buyer can browse available products and successfully place an order. Fail: The Buyer cannot place an order for an available product.	Provides the core marketplace functionality for purchasing products.
FR-002	Functional	The system shall allow the Buyer to make a payment for a placed order through the payment system.	High	Pass: The Buyer can initiate and successfully complete payment for an order. Fail: The payment cannot be initiated or completed.	Enables Buyers to complete the financial part of the transaction.
FR-003	Functional	The system shall allow the Inspection Agent to inspect the ordered product and submit an inspection report.	High	Pass: The Inspection Agent can record the product condition and successfully submit the inspection report. Fail: The report cannot be submitted successfully.	Provides independent verification of the product's condition.
FR-004	Functional	The system shall allow the Buyer to view the inspection report and either approve the product or raise a dispute.	High	Pass: After the report is submitted, the Buyer can view it and select either Approve or Raise Dispute. Fail: The Buyer cannot view the report or record a decision.	Allows the Buyer to make an informed decision and provides protection if the product does not meet expectations.
FR-005	Functional	The system shall hold payment in escrow and release the payment to the Seller when the required transaction conditions are satisfied.	High	Pass: Payment remains in escrow until the required conditions are satisfied and is then released to the Seller. Fail: Payment is released before the required conditions are satisfied.	Protects both Buyer and Seller during the transaction.
NFR-001	Non-Functional – Security	The system shall protect user and payment information using secure authentication and encrypted communication.	High	Pass: User and payment information is transmitted through secure, encrypted communication. Fail: Sensitive information is transmitted without appropriate protection.	Protects sensitive user and payment information.
NFR-002	Non-Functional – Performance	The system shall respond to Buyer and Inspection Agent actions within 3 seconds under normal operating conditions.	Medium	Pass: At least 95% of valid requests receive a response within 3 seconds under normal expected load. Fail: More than 5% exceed the 3-second response time.	Ensures the system is responsive and easy to use.
